Grayson's Gift

Bed Shaker and Strobe Specialty Detector Application

Our Mission is to provide a safer, healthier life for the deaf and hard of hearing community within our community.

● GraysonsGift@gmail.com

What is Grayson's Gift?

Grayson's Gift is a project that was started shortly after the birth of Chris and Kristen Carmany's youngest son who was born Hard of Hearing in 2014. As a firefighting family it was a concern to them knowing their son couldn't hear traditional smoke and carbon monoxide detectors. When researching the specialty units their son would need the cost was shocking. It then became the family's passion to start a program that could benefit those in need of the specialty detectors. The Carmany's were then able to partner with Gerrish Township Fire Department as a host department to provide specialty detectors to those left vulnerable in Roscommon County at no cost to them. Since the program started we have partnered with township fire departments in Roscommon County and as of November 2015 will be able to start distributing units to the children residing in Roscommon County that are deaf, Hard of Hearing or severely Cognitively Impaired. Our next Phase focuses on being able to provide them to all seniors and qualifying residents in Roscommon County.

Specialty Detector

We have chosen to use a Krown KA300 made by Krown Manufacturing. This unit has a bed shaker and a strobe alert device along with a standard alarm. It picks up signals from transmitters placed on standard units in the home. You are able to connect up to 3 units to this including but not limited to units such as standard smoke detectors, standard carbon monoxide detectors, door knocker units, weather alert systems, and house alarms.

What the Program Provides:

For qualifying individuals fire departments will send representatives in the home to install the KA300 unit. While in the home they will ensure each smoke detector and carbon monoxide detector is working properly and that the home is up to safety code, including checking that each detector is not expired, has working batteries, and will provide new detectors or batteries if needed in hopes of being able to ensure every home is up to code at the time of installation. After the unit is installed a representative from Grayson's Gift will do a follow up call within a week and would like to do a scheduled follow visit within 3 months to see how the device is working for each family. We will also provide info to 911 that a unit was placed in the home for emergency response purposes.

Contact Name _____

Address _____

Township _____

Phone Number _____

Of Adults in the Home _____

Of Children in the Home _____

Is individual that you're applying for:

CIRCLE ONE

DEAF HARD OF HEARING

SEVERE COGNITIVE IMPAIRED
